

**AMENDMENTS TO THE CLAIMS**

1. (currently amended): A mobile apparatus comprising:  
a ~~broadcast receiving function~~ television tuner for receiving a television broadcast; ~~and~~  
a ~~telephone communication device function~~ for performing a telephone communication[[,]]; ~~wherein~~  
an audio output device comprising a left-channel audio output unit and a right-channel audio output unit[[,]]; and  
an audio processing circuit for outputting a left-channel signal of a television audio to the left-channel audio output unit and outputting a right-channel signal of the television audio to the right-channel audio output unit when a telephone communication is not performed and the television is viewed and listened to, the audio processing circuit further generating a monaural television audio signal from the left-channel signal and the right-channel signal of the television audio, outputting a monaural television audio using one of the left-channel and right-channel audio output units and outputting a telephone-received audio using the other audio output unit in the case of performing the telephone communication at the time of viewing ~~and/or~~ listening to the television, ~~are provided.~~

2. (currently amended): A mobile apparatus as claimed in Claim 1, ~~wherein~~ further comprising:  
a setting means for setting which of the audio output units is used for outputting the television audio and the telephone-received audio in the case of performing the telephone communication at the time of viewing ~~and/or~~ listening to the television, ~~is provided.~~

3. (currently amended): A mobile apparatus as claimed in Claim 1, ~~wherein~~ further comprising:  
a sound volume ratio control means for controlling a ratio of sound volumes of the two audio output units in the case of performing the telephone communication at the time of viewing ~~and/or~~ listening to the television, ~~is provided.~~

4. (currently amended): A mobile apparatus as claimed in Claim 3, ~~wherein~~ further comprising:

a setting means used by a user for setting the sound volume ratio ~~is provided~~.

5. (previously presented): A mobile apparatus as claimed in Claim 3, wherein the sound volume ratio control means controls the sound volume ratio so that the sound volume of the telephone-received audio is higher than the sound volume of the television audio.

6. (currently amended): A mobile apparatus as claimed in Claim 1, ~~wherein~~ further comprising:

a display device for displaying a television image and a telephone-received image and a display control means for displaying both of the television image and the telephone-received image on the display device in the case of performing the telephone communication at the time of viewing and/or listening to the television, ~~are provided~~.

7. (previously presented): A mobile apparatus as claimed in Claim 6, wherein the display control means window displays either the television image or the telephone-received image.

8 (original): A mobile apparatus as claimed in Claim 6, wherein the display control means divides a display screen into two regions and displays the television image in one of the divided display regions and the telephone-received image in the other region.

9 (currently amended): A mobile apparatus as claimed in Claim 7, ~~wherein~~ further comprising:

a setting means used by the user for setting sizes and display positions of the television image and the telephone-received image displayed on the display device ~~is provided~~.

10. (previously presented): A mobile apparatus as claimed in Claim 1, wherein

**THE AUDIO OUTPUT DEVICE IS AN EARPHONE OR A HEADPHONE.**
